Service & Repair

Introduction

Repairing hydraulic cylinders involves more than just replacing broken parts. By inspecting issues like the source of a defect projected over several years, we have improved our level of service and can guarantee trouble-free operation in future, without unexpected defects. Our parts management distinguishes itself through its fast delivery service, which is made possible by the standing agreements we have with our selected suppliers.

...we can guarantee trouble-free operation...

General

Vremac Cylinders' valuable expertise in designing and assembling hydraulic cylinders has been won over the course of 60 years. This profound knowledge not only includes a large number of commonly used applications, but specialized and custom applications as well. Vremac Cylinders can provide any solution for hydraulic movement in market segments such as:

- Dredging and offshore equipment
- Loading and unloading systems for transport and container handling
- Offshore drilling equipment
- Bridges and locks
- Press makers
- Machine and equipment manufacturing

Repair

Scheduled maintenance is one of the special services provided by Vremac Cylinders. A maintenance schedule will be drawn up in consultation with the client. By planning your maintenance, you will be better able to manage your downtime.

In the event of malfunctions/breakdown, we can provide you with our on-the-spot support. We will always consult with you to agree on where, when and how the activities will take place.

After inspection, we will contact you with our proposal to quickly repair your cylinder. Following the repairs, all cylinders are tested and you are welcome to witness the pressure test.

Q-HSE

Safety is one of the core values that reinforces our culture of safe behavior. Effective safety, health and environmental management are essential in everything we do.

Vremac Cylinders' quality management system of is certified to EN ISO 9001. All our products are designed and manufactured in accordance with international standards and, upon request, are certified by recognized authorities such as ABS, DNV and Lloyd's.
